

POORNA CHANDAR SURINENI

Naperville, Illinois, (513)-954-2388, surinenipurnachander@gmail.com, GitHub: <https://github.com/Purna88836>
LinkedIn: <https://www.linkedin.com/in/poorna-chandar-surineni>

CAREER OBJECTIVE

Accomplished Software Engineer with a strong background in cloud infrastructure automation and DevOps, with expertise across Azure, AWS, Kubernetes, Terraform, and CI/CD practices. Committed to contributing to innovative cloud architecture and process automation initiatives while continuously advancing technical capabilities and fostering collaboration within a dynamic organization.

EDUCATION

University of Cincinnati	AUG 2022 – AUG 2023
Master of Science, Major: Information Technology	CGPA: 4.0/4.0
Gokaraju Rangaraju Institute of Engineering and Technology	AUG 2016 – AUG 2020
Bachelor of Technology, Major: Electronics and Communication Engineering	CGPA: 8.28/10.0

TECHNICAL SKILLS

Programming Languages:	Python, Java, JavaScript, .Net, NodeJS, shell, bash, PowerShell
Tools:	Jenkins, Kubernetes, EKS, Docker, Puppet, Chef, Ansible, Terraform, Code Build, OpenShift
Cloud Technologies:	AWS, Azure, GCP, Cloud Formation, AWS Code Pipeline, Code Deploy, Helm, OpenStack
Operating Systems:	Windows, UNIX, Red Hat, Ubuntu, Linux, Debian, RHEL
Repository:	GitHub, Code Commit, GitLab CI/CD
Monitoring Tools:	Jira, Prometheus, Grafana, ELK Stack, AWS CloudWatch

PROFESSIONAL EXPERIENCE

Egen Solutions LLC – Naperville, Illinois	FEB 2024 – PRESENT
Software Engineer	
- Built scalable GitHub CI/CD pipelines using Shell scripts and Python to automate code build and deployments. - Designed Python automation tasks to streamline environment setup, package installations, and release activities. - Developed reusable GitHub Actions workflows for standardized application deployment across multiple projects. - Architected modular GitHub workflows to enable scalable and reusable CI/CD pipelines across diverse projects - Implemented automated testing and reporting mechanisms in CI workflows to ensure code quality before release. - Automated artifact storage and versioning in S3 buckets to enhance release management practices. - Designed and implemented an end-to-end MLOPS platform integrating AWS Sage Maker, GitHub workflows, and CI/CD automation to streamline model development and deployment for data science teams. - Provided ongoing support and enhancements for developed CI/CD pipelines, assisting team members with troubleshooting. - Developed custom GitHub workflows to integrate security scans and compliance checks into CI/CD pipelines. - Led the Quick Sight migration efforts by developing solutions to move assets from lower to higher environments. - Integrated AWS deployment automation within CI/CD pipelines, reducing manual steps and deployment errors. - Designed notification systems within pipelines to alert teams on build failures and deployment statuses.	
Always Education LLC – Cincinnati, Ohio	JAN 2024 – FEB 2024
Full Stack Developer	
- Assisted in setting up continuous integration pipelines for full-stack application testing and deployment. - Collaborated with development teams to optimize application deployment workflows in GCP App Engine. - Built cloud-native backend services using GCP serverless technologies like Cloud Functions and Cloud Run. - Optimized video streaming performance by configuring GCP CDN to deliver high-availability and low-latency content. - Implemented signed URLs and secure token authentication for controlling access to video content via CDN.	
Premier IT Solutions LLC – Cincinnati, Ohio	NOV 2023 – JAN 2024
Software Developer	
- Built Python scripts for cloud resource automation, improving operational efficiency and reducing manual effort. - Developed CI/CD pipelines integrating source control, build automation, and cloud deployment workflows.	

- Optimized cloud deployment processes by writing reusable infrastructure-as-code templates.
- Developed automated deployment pipelines for AWS and GCP environments using GitHub Actions and Terraform.
- Documented best practices for cloud migration, CI/CD configuration, and infrastructure security.

DXC Technology - Bengaluru, India

JUL 2020 – AUG 2022

Software Engineer

- Improved API Gateway response and DynamoDB access in Python microservices on AWS Lambda using boto3.
- Orchestrated multi-region AWS deployments, ensuring business continuity and disaster recovery readiness.
- Created scalable CI/CD pipelines integrating GitHub, AWS Code Pipeline, and Code Deploy for faster deployments.
- Designed and implemented secure IAM policies and roles to control access to AWS services and data.
- Led cloud automation initiatives, writing Python scripts for auto-scaling and disaster recovery setups.
- Designed and implemented secure IAM policies and roles to control access to AWS services and data.
- Utilized Ansible for the deployment of CloudWatch Agent, SSM Agent, and Apache Web Server on EC2 instances.
- Built scalable AWS infrastructure solutions using services such as EC2, S3, VPC, IAM, and RDS.
- Automated infrastructure provisioning and environment setup using Terraform and CloudFormation templates for production systems.
- Participated in daily stand-ups, sprint planning, and agile ceremonies for feature development and review.

ACADEMIC PROJECTS

Cloud Retail Application

- Developed scalable Cloud retail app using AWS, Python, Flask, and Docker.
- Managed AWS resources through CloudFormation, ensuring seamless infrastructure control.
- Led cost-efficient serverless setup with Lambda, VPC, EC2, and S3.

WEB-BASED CLOUD FILE SHARE

- Designed Jenkins CI/CD pipeline to automate the build, testing, and deployment of Azure-based Java app.
- Improved deployment efficiency using Ansible automation in web-based cloud file share.
- Created Java cloud file share app on Azure, leveraging GitHub, Terraform, and efficient DevOps tools.

FARM-TO-BASKET WEB APPLICATION:

- Developed the front end of the 'Farm-to-Basket' project using HTML, CSS, and JavaScript, ensuring a user-friendly interface.
- Engineered the backend using Django and Python, focusing on robustness, scalability, and efficient data processing.
- Managed the project's database needs with MySQL, implementing optimized data storage and retrieval mechanisms.
- Constructed and maintained a CI/CD pipeline using Jenkins, enhancing development efficiency and code quality.
- Deployed the application in a Kubernetes cluster, leveraging containerization for improved scalability and reliability.
- Built and configured AWS infrastructure using Terraform, ensuring a secure, scalable, and cost-effective environment.
- Implemented a 3-tier architecture focused on the 6 pillars of cost optimization, reliability, operational efficiency, performance efficiency, scalability, and high availability.
- Utilized Ansible for the deployment of CloudWatch Agent, SSM Agent, and Apache Web Server on EC2 instances.
